The TECC Apek

Congratulations on purchasing your TECC Apek Electronic Cigarette Kit

Using your Apek

Priming the Atomizer Head

To install a new atomizer head, follow the process shown in Priming the Atomizer Head above. To remove the atomizer head by firmly pulling it straight out. The atomizer head to sit in a tank full of E-liquid for five minutes before use. This ensures the atomizer head is fully saturated with E-liquid before use.

Switching On and Off:

To turn on, press the power button three times in quick succession. If the Apek is already on, press the button three times in quick succession to turn it off. If the blue indicator light will flash three times.

Filling the Tank

Hold the clear section of the tank and unscrew the top cap. Avoid filling down the central airflow hole. Once filled, screw back onto the battery.

Charging the Battery:

Cord of E-liquid to reduce noticeably as the charge in the battery gets close to running out. The Apek is recharged by inserting the charge lead into the USB Charging Port on the top cap. The indicator light will turn on and remain on while charging. Once fully charged, the red indicator light will turn off.

Installing/Replacing an Atomizer Head:

If an atomizer short circuit occurs, the indicator light will illuminate for 2 seconds and the Apek will turn off. Replace the atomizer head if this occurs.

Precautions

• Do not attempt to repair a faulty Apek as these are sealed units with no serviceable parts.
• Please dispose of dead batteries in accordance with your country’s manufacturer.
